```
* @param array $bindings * @param \Closure $callback * @return mixed * * @throws \Illuminate\Database\QueryException */ protected function runQueryCallback($query, $bindings, Closure $callback) { // To execute the statement, we'll simply call the callback, which will actually // run the SQL against the PDO connection. Then we can calculate the time it // took to execute and log the query SQL, bindings and time in our memory. try { $result = $callback($query, $bindings); } // If an exception occurs when attempting to run a query, we'll format the error // message to include the bindings with SQL, which will make this exception a // lot more helpful to the developer instead of just the database's errors. catch (Exception $e) { throw new QueryException( $query, $this->prepareBindings($bindings), $e ); } return $result; } /** * Log a query in the connection's query log. * * @param string $query * @param array $bindings * @param float|null $time * @return void */ public function logQuery($query, $bindings, $time = null) { $this->event(new QueryExecuted($query, $bindings, $time, $this)); if ($this->loggingQueries) {
```

Arguments

1. "SQLSTATE[HY000] [1045] Access denied for user 'root'@'localhost' (using password: YES) (SQL: select * from `site_categories` where `is_active` = 1 and `site_cat` ▶"
